

NOTES ON THE SPECIES OF ERYTHRINA. XIII

B. A. Krukoff

Consulting Botanist of Merck Sharp & Dohme Research Laboratories, Rahway, New Jersey; Honorary Curator of New York Botanical Garden.

Erythrina Symposium II was published in LLOYDIA in Sept./ Oct. 1977. Eight additional papers are planned for publication early in 1979 as Erythrina Symposium III. I plan to submit a brief paper for this Symposium, reserving the present one for information which is best published separately.

169 new collections were examined in connection with the preparation of this paper. No novelties are described as these, as well as the extensions of range of various species, are reserved for Supplement XII which will be published as a part of Erythrina Symposium III.

The important part of this paper is List of Exsiccatae covering specimens cited in papers of this series including the first monograph published in BRITTONIA in October 1939.

1. Erythrina fusca Loureiro, Fl. Cochinch. 427. 1790 based on Gelala aquatica Rumphius, Herb. Amb. 2:235. t.78. 1750.

Belize: Jansen & Ives 1188 (MO) (Belize District, coastal shoreline), John D. Dwyer 10741 (US). Costa Rica: Guanacaste: +10 m, G. Davidse 1452 (F). Colombia: Cauca: H. Garcia-Barriga 18834 (F). List of Exsiccatae

The first figure in Exsiccatae after the collector's name is the collector's number of the specimen, and the figure in parenthesis is the number of species as they are arranged in Conspectus of the species of the genus Erythrina (LLOYDIA 37(3), September 1974) and in Supplements VII-XIII (inclusive).

1) American Species

The list of Exsiccatae for American species is fairly complete since practically all collections seen by me in various Herbaria are cited, with the exception of the following common species: E. fusca, E. crista-galli, E. falcata, E. poeppigiana, and E. herbacea L. ssp. herbacea. These are commonly collected and easily identified. I have seen many other collections of these common species but have not prepared cards for them and have not cited them in any of my papers.

2) Asiatic, Polynesian and Australian Species

These species were not covered in my original Monograph published in Brittonia in 1939 which treated only American species. I have, however, examined and annotated many specimens of these species without preparing cards and without citing them in any of my papers. These include E. suberosa, E. microcarpa, E. stricta, E. resupinata, E. arborescens, E. subumbrans, E. variegata, E. tahitensis, and E. euodiphylla. Cards for E. vesperilio, however, were prepared in connection with Erythrina Symposium II and they are cited in Supplement X.

3) African Species

These species also were not covered in the original Monograph of the American species, and the first paper to include African species was published in Erythrina Symposium I in LLOYDIA in September, 1974. Cards for many collections of African species are in the card index. However, they are not cited in my papers, this especially as African species are usually well named.

Only numbered collections and those of which the dates of collection are recorded have been listed. If a collector gathered his collection together with others, only his name is cited in this list. Collections with Dr. Prance's numbers are cited under Prance.
